## Datasheet

cross section primeTOUCH profile

## primeTOUCH customised

- ▶ variable in size
- ▶ high precision
- ▶ fast response
- ▶ reliable performance
- ▶ field tested

Based on the primeTOUCH technology, EXACT solutions provides a system which is adaptable to almost every application. Single housing modules and customised electronics (as seen above) can be combined to touch sensors in different sizes or curvature. The system works with a provided power adapter and USB cable. For further information please contact us to discuss your individual project.

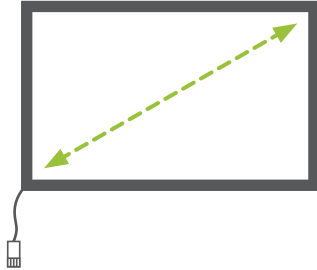

# primeTOUCH customised

## Datasheet

---

### primeTOUCH CUSTOMISED

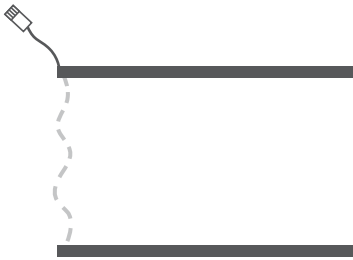

---

The primeTOUCH customised frame consists of individual segments. With this system, interactive display surfaces with a diagonal of more than 500" can be realised.

### NO-Y

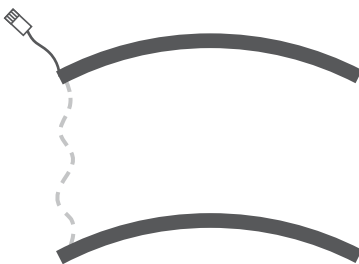

---

In some applications, the vertical sensor parts of the primeTOUCH customised might be disturbing. Therefore, EXACT solutions provides a system which works with only the horizontal parts of the frame. On request, the primeTOUCH customised-no-Y is also available for angled surfaces. The only connection between both sensor parts is a thin, easily hideable cable.

### CURVED

---

As curved, large format screens are increasing in popularity, there is a high demand for corresponding interactive systems. The primeTOUCH curved from EXACT solutions is such a system. It functions with the same reliability and performance as the primeTOUCH customised. The minimum bending radius begins at 2.5 m.
